

Instructions to Authors

Revised April 5, 2011

Journal of
Gastroenterology

© Springer

Prerequisites for Publication: The editors of the Journal of Gastroenterology abide by the recommendations formulated by the International Committee of Medical Journal Editors (<http://www.icmje.org/>). A Certificate of Exclusive Submission and Disclosure of Conflict of Interest, included in each issue, must be submitted to the journal's editorial office by uploading it as a PDF via ScholarOne Manuscript. **IMPORTANT: Upon receipt of a Certificate of Exclusive Submission and Disclosure of Conflict of Interest, manuscripts are officially recognized as submissions.**

Ethics: All investigations on human subjects must be carried out in accordance with the World Medical Association Helsinki Declaration, adopted in 1964 and amended in 1975, 1983, 1989, 1996, 2000, 2002, 2004, and 2008. Authors should also follow the guidelines for the care and use of laboratory animals of their institution or national animal welfare committee.

Disclosed Potential Conflict of Interest: When submitting a manuscript to the Journal of Gastroenterology, all authors are required to disclose any financial relationship (within the past 12 months) with a biotechnology manufacturer, a pharmaceutical company, or other commercial entity that has any interest in the subject matter, materials, or process(es) discussed in the manuscript. Therefore, the Conflict of Interest Disclosure Statement on the ScholarOne Manuscript should be completed at the time of submission. The matters requiring disclosure are outlined in the JSGE Conflict of Interest Policy, available on-line at <http://www.jsge.or.jp/english/journal/journal.html> (IV. Matters Requiring Disclosure). If you, your spouse, or other immediate family member has any of the listed relationships with a commercial entity that has an interest in the subject matter in your manuscript, please refer to the JSGE's definition for potential conflict of interest that must be disclosed. Authors are required to disclose any potential conflict of interest by using the following example inserted between the acknowledgment and the reference section under "Conflict of interest."

Conflict of interest

A (author name) received a research grant from Z; B serves as a consultant to Y (entity name); C received lecture fees from X; D received honoraria for writing promotional material for W; E holds a patent on V; F's spouse is chairman of U.

If no conflict of interest exists, authors should so state as follows between the acknowledgment and the reference section under "Conflict of interest": "The authors declare that they have no conflict of interest."

Manuscript Submission via ScholarOne Manuscript: Authors should submit their manuscripts to the Journal of Gastroenterology online to facilitate even quicker and more efficient processing. Electronic submission substantially reduces the editorial processing and reviewing time and shortens overall publication time. **Please log in directly at: <http://mc.manuscriptcentral.com/jg> and upload your manuscript following the instructions given.** In case you encounter any difficulties while submitting your manuscript online, click on the Get Help Now icon in the upper right corner.

ScholarOne Manuscript Requirements:

Microsoft Internet Explorer 5.x or later, Netscape 7.x or later
Adobe Acrobat Reader
Electronic files of the manuscript text
Electronic files of the manuscript figures and illustrations (scanned or exported)

Author Accounts: Authors entering the journal's ScholarOne Manuscript site can either create a new account or use an existing one. When you have an existing account, use it for all your submissions; you can track their status on the same page. If you have forgotten your user i.d. and password, please enter your mail address in Password Help. You will then receive an automatic e-mail with your user i.d. and password. Alternatively, please create a new account and then follow the instructions given on the screen.

Getting Started: Once you have logged into your account, ScholarOne Manuscript will lead you through the submission process in an orderly, step-by-step process. If you cannot finish your submission in one visit, you can save a draft and re-enter the process later at the same point for that manuscript. While submitting your electronic manuscript, you will be required to enter data about your manuscript in the system. These include full title, author names and affiliations, and so forth, as listed below under Manuscript Preparation. Support for special characters is available. At any point during this process, there are Help buttons available for frequently asked questions.

Uploading Files

Main Documents: Main documents of articles should be uploaded in rich text format (RTF) or as a Microsoft Word document (.doc).

Tables: Use the table functions of your word-processing program, not spreadsheets, to make tables. Tables may be uploaded separately from the main document or inserted into the main document.

Figures: Common graphic files such as GIF, JPEG, EPS, and TIFF are supported. Please upload figures that are satisfactory for the review process.

After uploading the parts of the article in this manner, the system will convert the files to PDF format. You can view the result of the conversion with Adobe Acrobat Reader. You will be also notified by e-mail that your submission was successful.

At any point during this process, there are Help buttons available to see frequently asked questions.

If the total size of the files exceeds the file volume (30MB) for online submission, reduce the resolution of large files for initial submission.

Keeping Track: After submission, you may return periodically and monitor the progress of your submission through the review process. If you are unable to submit your manuscript via ScholarOne Manuscript, please contact the editorial office:

The Editor, Journal of Gastroenterology, The Japanese Society of Gastroenterology, K-18 Building, 8th Floor, 8-9-13 Ginza, Chuo-ku, Tokyo 104-0061, Japan.

Fax: +81 3 3289 2359

e-mail: edi.board@jsge.or.jp

Manuscript Preparation

Manuscript Form: Abstract, text, references, and table and figure legends must be typed double-spaced with wide margins. Incomplete or improperly prepared manuscripts will be returned to authors without review. A separate title page should be provided.

Abstract, text, acknowledgments, references, tables, and legends should begin on separate sheets and follow in that order. Standard abbreviations and units should be used. Define abbreviations at first appearance, and avoid their use in the title and abstract. All manuscripts must be written in English. Authors whose native language is not English should seek the assistance of a colleague who is a native English speaker and is familiar with the field of work.

Title Page: The title should be brief, specific, and informative. Include full names of authors, academic affiliation, address (including telephone, fax number, and e-mail address) and a short title (not exceeding 40 letters and spaces).

Abstract: A structured abstract of not more than 250 words is required. It should be divided into the following sections: background, methods, results, and conclusions. Also supply 3–5 key words for indexing.

Text: The body of the article should be divided into four sections: Introduction, Methods, Results, and Discussion. The Introduction should state the purpose of the work and provide a pertinent summary of the rationale for the study or observation. In Methods, observational or experimental subjects should be described clearly. Generic names should be used for drug names. If authors so desire, brand names may be inserted in parentheses. The methods should be stated in sufficient detail to allow other workers to reproduce the results. The statistical methods used should be outlined with enough

detail to enable knowledgeable readers with access to the original data to verify the reported results. Results should present findings in logical sequence, with the minimum number of tables and illustrations necessary for summarizing only important observations. In Discussion, new and important findings should be discussed with reference to other reported work, and conclusions should be added. Data and other material given in the Introduction or the Results section should not be repeated in the Discussion section.

References: Number references consecutively in the order cited in the text. Accuracy of reference data is the author's responsibility. Personal communications and unpublished data should not be included in the text. If such a citation is from someone other than the author(s), a letter should be submitted in which the direct quotation is given with the signature of the person quoted. Unpublished papers accepted elsewhere may be included in the list by designating the journal followed by (In press) in parentheses. Provide inclusive page numbers for all references. Journal titles should be abbreviated as in *Index Medicus*. In principle, only materials published in English can be used as references. When absolutely unavoidable, papers published in a language other than English may be used, but only if they have an English abstract. For papers written in a language other than English, follow the style of example 2 below. (Include English abstract information in parentheses) In citation of articles, list the first six authors only and add "et al." if there are seven or more authors.

1. Parkin DM, Clayton D, Black RJ, Masuyer E, Friedl HP, Ivanov E, et al. Childhood leukaemia in Europe after Chernobyl: 5-year follow-up. *Br J Cancer*. 1996;73:1006–12.
2. Ikeda M, Shiratori K, Shimizu K, Watanabe S, Hayashi N. The mechanisms of the inhibition of gastric acid secretion induced by intraduodenal amino acids in rats (in Japanese with English abstract). *Nippon Shokakibyō Gakkai Zasshi (JSG)*. 1997;94:12–20.
3. Phillips SJ, Whisnant JP. Hypertension and stroke. In: Laragh JH, Brenner BM, editors. *Hypertension: pathophysiology, diagnosis, and management*. 2nd ed. New York: Raven; 1995. p. 465–78.
4. Schofield PF, Haboubi NY, Martin DF. *Highlights in coloproctology*. Berlin Heidelberg New York: Springer, 1993.

Tables: Cite all tables in the text. Each table should be given a number and a brief informative title and should appear on a separate page. The title should be included with the table. Explain in footnotes all nonstandard abbreviations that are used. Footnotes should be indicated by superscript lowercase letters (or asterisks for significance values and other statistical data) and included beneath the table body.

Figures: Cite all figures in the text. Figure legends should be typed on a separate sheet. Submission of previously published figures should be avoided. If they are necessary, they must be accompanied by an acknowledgment of the source and permission by the copyright holder. All figures should be numbered using Arabic numerals. Figure parts should be denoted by lowercase letters. If illustrations are supplied with uppercase labeling, lowercase letters will still be used in the figure legends and citations.

Supply all figures in one of the following formats: TIFF, JPEG, EPS, PDF, Word, Excel, PowerPoint.

For detailed instructions in preparing figures electronically, follow the link (<http://www.springer.com/535>) to the specific instructions for artwork.

Electronic Supplementary Material: Electronic Supplementary Material (ESM) for a paper will be published in the electronic edition of this journal provided the material is:

- submitted in electronic form together with the manuscript
- accepted after peer review

ESM may consist of:

- information that cannot be printed: animation, video clips, sound recordings (use QuickTime, AVI, MPEG, animated GIF, or any other common file format)
- information that is more convenient in electronic form, e.g., sequences, spectral data, etc.
- large quantities of original data that relate to the paper, e.g., additional tables, large numbers of illustrations (color and black-and-white), etc.

Legends must be brief, self-sufficient explanations of the ESM. ESM is to be numbered and referred to as S1, S2, etc.

After acceptance for publication, ESM will be published as received from the author in the online version only. Reference to this material will be given in the printed version.

Rapid Communications: Concise papers (four printed pages or less) that are definitive and original will be considered as Rapid Communications at the request of the authors and approval of the editor. Manuscripts should not exceed 15 double-spaced, typewritten pages, including references, tables, and figures (each table or figure counts as one manuscript page). A structured abstract should be included (not to exceed 150 words). The decision to accept will be made only for manuscripts requiring no editorial changes or revisions. Rapid Communications, if accepted, will be published in the next available issue of the journal.

Case Reports: A large number of Case Reports are submitted. The *Journal of Gastroenterology* will accept only a very limited number of Case Reports, which must be truly original or have significant educational implications for diagnosis and treatment. Case Reports should be concise, consisting of an Abstract (not more than 200 words), Introduction, Case Report, and Discussion.

Letters to the Editor: Letters related to previously published articles are welcomed, and in such cases a copy of the letter will be sent to the previous article's author(s) to invite a response. Please send them attached to an e-mail addressed to: edi.board@jsg.eor.jp

After Acceptance: During the production phase the following issues must be clarified.

Offprints/Reprints: Offprints can be ordered by the corresponding author.

Color in Print: Online publication of color illustrations is free of charge. For color in the print version, authors will be expected to make a contribution toward the extra costs (¥60,000 for the first and ¥30,000 for each additional page). Otherwise the figures will be printed in black and white. Please note that, in such cases, it is the authors' responsibility to prepare figures to be illustrative enough to convey the necessary information even after they are converted into black and white.

Proofreading: Authors are informed by e-mail that a temporary URL has been created from which they can obtain their proofs. The purpose of the proof is to check for typesetting errors and the completeness and accuracy of the text, tables, and figures. Substantial changes in content, e.g., new results, corrected values, title, and authorship, are not allowed without the approval of the Editor.

Online First: An article will be published online after receipt of the corrected proofs. This is the official first publication citable with the DOI. After release of the printed version, the article can also be cited by issue and page numbers. After online publication, further changes can be made only in the form of an Erratum, which will be hyperlinked to the article.

Open Choice: In addition to the normal publication process (whereby an article is submitted to the journal and access to that article is granted to customers who have purchased a subscription), Springer now provides an alternative publishing option: Springer Open Choice. A Springer Open Choice article receives all the benefits of a regular subscription-based article, but in addition is made available publicly through Springer's online platform SpringerLink. We regret that Springer Open Choice cannot be ordered for already published articles. The basic fee for Springer Open Choice is \$3,000 USD, which can be invoiced in Euros. Invoicing will be done according to the location of the paying party (designated in the "Bill to" section of the Order Form). Customers providing payment from the Americas will be charged in US dollars, and customers providing payment from Europe, Africa, and Asia will be charged in Euros. VAT is not included in the \$3,000 price and will be added, at a standard rate, for customers who receive invoices in Euros. For further information, see Springer Open Choice at <http://springer.com/openchoice>.
